Trade Codes	Non-Industrial (Ni)
Allegiance	Terran Federation (Member World)
Star Type	K6V

Physical Geography

- **Description:** Wallach presents as a **brilliant, oppressive world** from orbit: deep blue oceans broken by pale cloud bands and wide belts of emerald and rust-toned land. The sky at the surface is usually **milky white to yellow-gray**, hazed by gas admixtures and constant humidity. Sunlight is harsh and diffuse, bleaching colors at low elevations and casting long, sharp shadows in upland regions.
The air smells faintly metallic and sour. Breathing unfiltered atmosphere produces throat irritation and long-term pulmonary damage in humans. Heat is omnipresent, but moderated by altitude, latitude, and near-constant winds. Sound carries oddly in the dense air; distant thunder, surf, and animal calls often overlap into a low, continuous roar.
- **Atmosphere:** Standard, but **Tainted**. Sky is milky white to yellow-gray. Air smells metallic and sour; causes throat/pulmonary damage if unfiltered.
- **Climate:** Average Surface Temp **50°C**. Harsh, diffuse sunlight and near-constant winds. Sound carries in a "low, continuous roar" due to atmospheric density.
- **Dimensions:** ~5,000 km Diameter | **Gravity:** 0.5G | **Hydrosphere:** 87% Water.

Major Climate Zones

1. Polar and High-Latitude Uplands

- **Conditions:** 15–35°C. Strong winds, reduced toxicity, frequent storms.
- **Habitability:** Primary zone for **Humans & Ursa**. Most infrastructure (including Starport) is here.
- **Native Fauna:**
 - *Quadrupedal Grazer:* A large, quadrupedal herbivore (300kg) with overlapping bone plates along its shoulders and spine. Defensive rather than aggressive, it moves in small herds.
 - *Quad-winged Flyer:* A flyer with metallic, armored plumage and four wings. Weighing ~30 kg, it relies on thermals and burst flight to hunt small upland fauna.
 - *Quadrupedal Burrower:* A burrower with a segmented mineralized carapace and spiked tail used for defense and digging. Weighing ~50 kg, it eats roots, fungi, and carrion.

2. Mid-Latitude Lowlands and Swamp Belts

- **Conditions:** 30–50°C. Extreme humidity, seasonal flooding, toxic spore blooms.
- **Habitability:** Core region for **Native Wallachians**.
- **Native Fauna:**
 - *Spiralback Leviathan:* A 2,000–3,000 kg amphibious grazer with a nautiloid-like shell. Generally placid, its immense mass makes it dangerous near settlements.
 - *Swamp Stalker:* A ~100 kg amphibian ambush predator. Explosively fast, most attacks are fatal within seconds.
 - *Mire Plodder:* A 300–500 kg amphibious herbivore with a domed shell. Wallachians partially domesticate them as pack animals.

3. Oceanic and Littoral Zones

- **Conditions:** Constant heat and violent storms. Variable salinity/chemistry.
- **Native Fauna:**
 - *Large Marine Grazer:* A 5,000 kg marine organism with a massive spiraled shell. Plays a critical role in oceanic ecosystem regulation.
 - *Breaker Eel:* A 2,000 kg armored predator with an elongated, plated body. Responsible for submersible losses.
 - *Luminous Drift Algae:* Actively migrating algal colonies that adjust buoyancy. Seasonal accumulations can be visible from orbit.

Populations & Demographics

The Ursa (63% / ~44,730)

- **Physiology:** Uplifted from North American brown bears. 2.5m tall; ~250 kg. Natural claws and immense strength.
- **Social Structure:** Clan-based; organized into **16 bloodline clans** tracing ancestry to

common progenitors.

- **Traits:** Despite some common stereotypes, the Ursa are a modern and literate society. Ursa come in all professions, they write, operate computers, and maintain complex mechanical infrastructure.
- **Adaptation:** Fur trimming to a short coat practiced in lower latitudes to adapt to heat.

Clan Organization & Governance

- **Autonomy:** Clans manage their own hunting grounds, homesteads, and local rituals.
- **Justice:** Disputes are resolved via ritualized cudgel duels, heated duels may involve their natural weapons (fangs and claws). Fights for honor/war usually involve a cutlass which are Wallachian Ursa’s favored weapons.
- **Leadership:** Elder Circles oversee planetary governance and digital clan bloodline records. Large gatherings feature councils, trading forums, and skill demonstrations.

Major Ursa Settlements

Settlement	Population	Role & Description
Stonepeak	~3,500	High plateau hub for trade, ceremonial dueling, and skill demonstrations.
Riverclaw Village	~2,800	Mid-altitude river settlement; center for fishing, herding, and seasonal agriculture.
Ashridge	~2,000	Volcanic ridge stronghold; home to Elder councils and youth training.
Arden’s Landing	~2,000	(Shared with humans). Trade hub and primary interspecies meeting place.

Culture & Lifestyle

- **Habits:** Ursa enjoy extended periods outdoors and alone but engage in social gatherings when needed.
- **Cuisine:** Protein and fat-based diet. Favorites include large prey, river fish, tubers, and fungal syrups. Meats are roasted, smoked, or preserved via fermentation.
- **Specialty: Fireroot Cakes** – A baked tuber-fungal mix containing naturally fermenting

spores.

- **Entertainment:** Ritualized dueling, wrestling, and endurance games. Hunting competitions and outdoor skill demonstrations are high-prestige events.
- **Media:** Strong tradition of storytelling through books, movies, and performances, often exploring human-Ursa dynamics.

The Humans (37% / ~26,270)

- **Origin:** Descendants of Romanian-origin settlers.
- **Social Structure: Feudal Technocracy** under a King, organized into six noble houses. Loyalty is maintained through familial ties and complex oaths.
- **Nobility & Prestige:** Nobles admire physical prowess. A significant symbol of prestige for a House is employing an **Ursa Captain of the Guard**, respected for their immense combat skill and training.

The Noble Houses

House	Role & Territory	Description
House Corvin	The King's House	Central authority; oversees planetary governance and defense.
House Arden	Logistics & Trade	Starport city administration; descended from the legendary Explorer Arden.
House Voss	Military Defense	Controls the upland forts; maintains the planetary defensive perimeter.
House Tellan	Agriculture	Holds large agricultural estates; primary food and light industry hub.
House Ionescu	High Nobility	Established noble lineage within the feudal hierarchy.
House Radulescu	High Nobility	Established noble lineage within the feudal hierarchy.
House Petrescu	High Nobility	Established noble lineage

		within the feudal hierarchy.
--	--	------------------------------

Major Human Settlements

- **Arden’s Landing (Starport City):** 8,000 humans / 2,000 Ursa. The largest population hub; the center of trade, administration, and defense.
- **Fort Voss:** 3,000 humans. An upland military stronghold and strategic defensive node.
- **Tellan City:** 2,500 humans. The heart of the planet's agriculture and light industry.

Culture & Behavior

- **Justice:** Ritualized dueling is the standard method for resolving disputes, both internally within houses and between humans and Ursa.
- **Environment:** Daily life is dictated by the tainted atmosphere; enclosed buildings and sophisticated air filtration systems are essential for survival.
- **Media:** Storytelling, books, and movies are widely popular, frequently exploring themes where humans and Ursa are portrayed as antagonists or occasional, uneasy allies.
- **Traditions:** Nobles carry ceremonial broadswords. The annual **“Lineage Feast”** commemorates the founding of each house.

Human-Ursa Interactions

- **Social Dynamics:** Humans and Ursa coexist uneasily; duels are common and while not intentionally fatal outside of the Civil War, deaths happen frequently.
- **Trade:** Neutral trade hubs exist, often along river valleys and mid-latitude plateaus.
- **Mutual Respect:** The civil war reflects territorial and cultural disputes; both species respect each other’s combat and organizational skills.
- **Urban Hub:** Starport City is a unique interspecies hub, combining humans’ administrative control with Ursa skill and prestige.

The Wallachians (Native Sophonts)

- **Status:** Protected under Federation Law (Enforcement is inconsistent).
- **Demographics:** ~250,000 | **Technology:** TL 1–2 (Paleolithic / Early Neolithic).
- **Habitat:** Semi-nomadic agriculturalists and swamp dwellers primarily located in mid-latitude lowlands and wetlands.
- *NOTE: See the Wallachian document for more information*

Cultural & Biological Traits

- **Physiology:** Wallachians are bipedal amphibious sophonts, averaging 1.4–1.6 meters in height, with broad torsos and powerful lower limbs adapted for wading and swimming. Their skin is damp, thick, leathery, and semi-scaled, ranging in color from mottled greens

and browns to dark slate tones, often overgrown with symbiotic lichen or algae in older individuals. Large, reflective eyes adapted for low light dominate a flattened face, and a broad nasal structure allows them to filter fungal spores and tainted air. Hands are dexterous with slightly webbed fingers, suited for tool use and wet environments.

- **Nomadic Cycles:** Mandatory seasonal migration is dictated by toxic fungal bloom cycles, seasonal flooding, and megafauna migration routes.
- **Industrial Skill:** Sophisticated bronze metallurgy utilizing geothermal vents for smelting and smithing.
- **Social Complexity:** Advanced ritual calendars and extensive oral histories.
- **Diet & Domestication:** Rely on domesticated native plants, fungi, and the **Mire Plodder** (used as pack animals and food).

Settlement Patterns

- **Infrastructure:** Maintain permanent or semi-permanent sites—stone platforms, ritual grounds, and tool caches.
- **Limitations:** Environmental pressure prevents year-round occupation or large-scale urbanization despite growing cultural complexity.
- **External Threat:** Increasingly vulnerable to ecological disruption caused by Ursa expansion and human industrial infrastructure.

Government & Law

Wallach is ruled as a **Feudal Technocracy** under the hereditary monarchy of **House Corvin**, supported by six subordinate noble houses. Authority is personal and inherited, while administration is handled by a highly trained bureaucratic class responsible for logistics, infrastructure, and starport operations.

Formal law is minimal and inconsistently enforced. Trade is unrestricted, personal behavior is largely governed by custom, and most disputes are resolved through arbitration, reputation, or ritualized dueling. Modern firearms are regulated, but ceremonial melee weapons—especially broadswords—are culturally normalized among humans.

Government authority weakens rapidly beyond major settlements and is largely absent in the lowlands inhabited by native Wallachians. Ongoing civil war has further fragmented control, making effective governance a matter of local dominance rather than statute.

Technology & Economy

Overall Tech Level: 8 (Information Age)

- **Industrial:** TL 8–9 | **Water Tech:** TL 6 | **Personal Military:** TL 5 (Late 1800s/WWI equivalents).

- **Economy:** Non-Industrial. Strategic "stepping stone" value outweighs modest exports. Trade is largely intra-system or routed through Federation contracts.

The Wallach Civil War

Type: Contest of Legitimacy

Status: Late-stage conflict (Year 5 of 2999–present)

Outlook: Decisive breakthrough expected within 1–2 years

The Wallach Civil War is a prolonged struggle over **legitimate authority to represent Wallach within the Terran Federation**, conducted carefully to avoid triggering external intervention. Both factions formally acknowledge Federation supremacy and respect “red lines” forbidding attacks on civilian shipping, starport facilities, offworld personnel, or the use of prohibited weapons.

The **Ursa factions**, organized into **16 clans tracing bloodlines**, seek military control of Wallach as the legal basis for governance and Federation recognition. They operate strategically, balancing aggression with diplomacy: Ursa negotiators have secured **guarantees of non-intervention** from Federation authorities, limiting human options and ensuring the conflict remains localized. Leadership is situational and merit-based, with elite warriors directing raids, territorial campaigns, and symbolic victories rather than pursuing mass destruction.

The **human noble houses**, led by **House Corvin**, defend hereditary rule, administrative continuity, and control of the starport—the linchpin of interstellar legitimacy and trade. Humans are numerically inferior but **better equipped**, professionally trained, and strategically adept, relying on fortifications, disciplined retainers, and coordinated counter-raids.

Conflict is governed by **ritualized norms**: duels between champions carry symbolic and practical weight, sometimes determining control of contested regions without wider bloodshed. Violence escalates both as a response to resource scarcity and reactively when attacks occur, producing rapid, coordinated aggression that collapses once the immediate crisis ends.

Rumors circulate that **GenAssist**, the creators—and former near-destroyers—of the Ursa, may be attempting to contact the human forces, potentially offering advanced support or intelligence. These rumors have inflamed human caution and speculation but remain unverified.

Now in its fifth year, the war has reached a **phase of exhaustion**. Resources are strained,

casualties mount, and both sides remain determined to see the struggle to a decisive conclusion. Analysts expect a final breakthrough—through military tipping points, negotiated settlement, or collapse of human resistance—within the next one to two years.

Points of Interest

1. **The Starport (Class D):** Fortified neutral zone; last stronghold of the original human ruling class.
2. **The Old Hostel (★):** 200-year-old dive of "infamous quality"; recognized for its role in early Rimward expansion.
3. **The Ancient Site:** Classified/Restricted. Details held in Scout Service records; not publicly available.

System Notes

- **Star:** K6V | **Planets:** 10 | **Moon:** Ice-body with small outpost (10-100 pop).
