Notes						
* Brainforest - A small forest filled with red tinted trees. Peeling back the bark would reveal a mushy, pink, organic matter but you likely would not get that far as attempting to harm one of the trees will result in every tree in the forest releasing toxic fumes simultaneously. Anyone within 3 feet of a tree will take 2d6 poison damage. *						

Skyron — Planetary Profile

Overview

Skyron is a tidally locked twilight world orbiting a large M-class star. Once targeted for ambitious terraforming, a catastrophic orbital engineering failure froze the planet's rotation and stripped most of its early atmosphere. Survivors retreated into a hollowed remnant of the solar shade/asteroid the colonists had placed in geosynchronous orbit; that cavernel refuge has been adapted into the inhabited zone. Today Skyron's population lives beneath an **artificial ceiling lit and warmed by a legacy fusion core** and maintained by high-end environmental engineering, while politically the planet remains feudal and insular.

UWP Corrections & Key Constraints

(Per your **UWP D312431–A**) Skyron's starport and system logistics are poor (**Starport D**): only unrefined fuel is available locally and there are no shipyards or repair facilities. The planet is small (**Size 3**) with only trace surface atmosphere (**Atm 1**) and most of the surface water is frozen (**Hyd 2**) — note that the interior cavern reservoirs are not counted in Hydrosphere stats. Population class is code 4 (10k–99k); working estimate (~**85,000**) is consistent with the upper end of that band, but no formal census has been taken since major colonization decades ago.

Government is a **self-perpetuating oligarchy of Jarls**; law codes are generally low and weak (**Law 1**), though weapons are regulated more tightly in practice (weapon restrictions at **Law 3**). The average planetary TL is **A (10)**; the society is technologically competent where needed to maintain the cavern environment and extract petrochemicals, but medicine is poor (**TL4 medical practice**), and space/ heavy military capability on-planet is minimal or pre-spaceflight.

Geography & the Cavern Ecosystem

A failed terraforming attempt — specifically, the misplacement of several orbital asteroids intended as sunshades — caused an asteroid bombardment to scour the surface causing atmospheric loss and the spin-lock that created Skyron's twilight condition. One remnant asteroid (a last solar-shade mass) remains in a dangerously close geosynchronous orbit; another remnant was hollowed out and transformed into the inhabited cavern (with a surface area roughly the size of West Virginia).

Inside the cavern the environment is managed: a **large fusion generator** (left from the terraforming effort) forms the artificial "sun" at the cavern's ceiling, radiating heat and powering lighting and climate systems. Heat is piped outward and smaller subgenerators/distribution networks keep settlement rings temperate; temperatures are roughly tundra/taiga autumnal in the center (about **45–55°F**), getting colder and darker toward the edges. Periodic lava incursions from the planetary crust breach the cavern shell and must be patched and managed.

Flora and fauna are mostly imported Terran species selected for hardiness: dwarf conifers, grasses, and a tundra fauna mix (white-tailed deer, elk, reindeer herd, yak, bighorn sheep, puma, wolf packs, ~100 Siberian tigers, several brown bears). No native macroscopic life evolved pre-settlement; the planet hosts no indigenous biosphere outside the accidental introduction of the **pink forest grove** — an invasive, semi-organic grove with red-tinted trees. The pink trees' bark is mushy and pink beneath; attempting to cut or damage any tree causes the grove to emit instant, lethal toxic fumes in a three-foot radius (PCs: **2d6 poison damage** in your system).

Water is stored in several large reservoirs and thousands of small cisterns; the large reservoirs are annually refilled by imported comet ice under contract to an out-of-system logistics firm. The size of the cavern is far greater than needed to cause localized weather patterns.

Economy & Exports

Skyron's most unusual export is **fossil fuels**. Mostly **coal**. Despite the thin atmosphere, there are subsurface hydrocarbon deposits trapped and preserved by ancient geology and the failed terraforming process. These pockets were economical to access post-disaster and became the colony's primary commodity. Refining and shipping petrochemical products provide the planet's main cash flow to traders and the Scout Waystation links Skyron with offworld buyers. Local production otherwise focuses on foodstuffs and hides (subsistence animal husbandry), small-scale mining, and environmental maintenance services to keep the cavern habitable.

Society, Politics & Government

Skyron is governed by a **self-perpetuating oligarchy**: five major settlements (each with 1,000–5,000 residents) are ruled by *Jarls*. The Jarls form a council which elects a **High King** to coordinate planetary governance and represent Skyron to the Federation. The High King holds recognition as a **Federation Knight**. Although the formal structure is bureaucratic, the Jarls exercise practical, almost feudal power locally.

Population is 99%+ human with small numbers of other Terragen species. About half the population are second-generation settlers; many residents have only a tenuous sense of interstellar civilization. Medical care is primitive (analogous to 19th-century Earth for medicine), while environmental and engineering systems are comparatively advanced (to a **TL ~10** standard) because keeping the cavern alive is existential.

Politically, Skyron is currently **stable but restive**. A **Scout Waystation** maintains a modest Federation presence: ~300 support staff, a company of Federation Marines, two patrol cruisers, one Federation transport, and 3–5 scout craft. The Waystation and the Marine detachment are considered external to local population counts but are an invisible reminder of Federation oversight. Literally invisible too as the cavern and the orbiting asteroid block the view. Thanks to the ground situation, the officials posted to the waystation never visit Skyron proper.

Two Jarls—seen by many as populists—advocate de-facto independence (refusal of visitors, refusing Federation dues). The rhetorical slogan fueling this is: **“What has the Federation ever done for us?”**

Law & Security

Although the UWP lists the general Law Level as low, Skyron’s legal reality is complex: criminal law is weak or undeveloped (in practice, **Law 0** behavior for many criminal codes), while weapons are more tightly managed locally (weapon requirements enforced around a **Law-3** threshold). Disputes are heavily localized; extra-judicial settlements, vendettas, or noble decrees are routine. The planet lacks shipbuilding capacity and robust military industry; most defense is either Jarl-raised militia or the occasional mercenary force.

Religion & Culture

Faith of the Uncounted Flame

Classification: Pantheistic, decentralized, proscribed in several nearby systems **Common Name:** “The Flame of All Gods,” “The Burning Concord,” or simply the Faith

Doctrine

The Faith holds that all gods are sparks of a single cosmic fire. This fire sleeps beneath the surface of worlds, and its eruptions or quiescence mark the health of creation. Worship is not petitionary; it is **reciprocal exchange**. The faithful must “feed” the Flame with heat, breath, and living essence so that the gods remain awake and attentive to humankind.

Rituals

- Worship occurs around heat vents and lava channels within the asteroid-hollow.
- Offerings of animal blood, oils, or hair are burned or poured into the lava fissures while the congregation chants the *Litany of Sparks*.
- Once a decade, each community selects a **Bearer of the Flame** — a volunteer or condemned criminal — whose body is ceremonially “returned to the gods” by exposure to molten stone. The rite is not public, and outsiders are never permitted to witness it.
- Ordinary weekly rites involve collective breathing meditations before furnaces, symbolizing unity with the divine flame.

Structure

No priesthood exists. Each settlement’s Jarls appoint a **Speaker of the Heat**, typically a scholar or elder, to maintain the sacred texts and ensure the seasonal rituals occur. The texts

themselves are said to change over time — rewritten by hand and “clarified” by dreams from the Flame.

Taboos & Bans

- Followers may not extinguish open flame without a spoken apology.
- Water is considered spiritually dangerous; prolonged contact with cold water is thought to “drown the spirit.”
- The Faith sees maintaining the great ceiling fusion plant has become a **sacred civic duty**.

Off-World Reputation & The Ban

Neighboring systems have formally banned the Faith after several reports of “ritual immolations” and the cult’s refusal to cremate bodies off-world, insisting that only planetary lava conduits are valid.

Cause of the Ban

Though the Faith is not considered a risk to others. Its rituals rely on open flame, smoke, and combustion oils — a direct hazard in Skyron’s sealed habitats.

The Federation starport is located in a secondary cavern, smaller and more constrained than the main settlement-dome. The Scout Waystation is an offworld facility in an exo-planetary station. Ventilation and life support in both are delicate; the atmosphere is recycled, scrubbed, and closely monitored for trace toxins. A single ceremonial fire or burning of petrochemical incense can contaminate the entire air circuit.

Following several near-fatal incidents involving ritual offerings in the customs hall and a documented oxygen-level drop during a “Light of a Thousand Sparks” festival, the Federation issued a **permanent prohibition on open flames, incense, or oil offerings** anywhere within chartered zones — including the entry tunnels between the port cavern and the main settlement.

To locals, this is seen not as regulation but as the **cold denial of their gods**.

Cultural Consequences

The ban created a symbolic divide between Skyronians and the off-worlders stationed nearby:

Group	Consequence / Perspective
-------	---------------------------

Port Authority Maintains strict air control protocols, frequently confiscating shrine lamps, candles, and personal lighters. Federation Security claims the policy is “strictly environmental.”

Skyronians Consider the restriction sacrilegious — the denial of flame within living space is viewed as a denial of life itself. The starport cavern’s sterile, cold light is whispered to be “godless.”

Merchants and Travellers Caught in between. Some locals refuse to trade with off-worlders who will not share the heat of a ritual fire. Others exploit the division, smuggling votive oil to grieving families who want to “warm their dead” before export.

The Scout Waystation Enforces the ban even more strictly, with its environmental officers citing “persistent vapor contamination from unlicensed local activity.” This has made the already nearly unreachable station a forbidden zone to most locals — a place literally without warmth.

Perception

- **Federation Officials:** “We aren’t persecuting anyone. The regulations apply to all combustion, not just religious activity.”
- **Skyronians:** “They fear the warmth. They come from cold worlds that forgot how to feel.”

Cultural Note: Despite the grim tone, most Skyronians see the Faith as affirming and communal. To them, warmth is survival, and offering warmth back to the gods is simple gratitude. Outsiders, however, often misinterpret the glowing vent shrines and heat-mask processions as barbaric.

Among Skyronians, it’s now common to light a candle at the border of the starport cavern, placing it on the rock floor before stepping inside. These candles are not retrieved — by custom, the first flame that goes out marks the god who has been denied entry that day.

Organizations & Factions

You specified two important local organizations; I’ve preserved their core attributes:

Faction Name	Attributes & Details
--------------	----------------------

1. The Hearth Compact (citywide)	Progressive in outlook, obscure visibility, hesitant to use force beyond what regular citizens would do, hostile to player characters, and controlling a fortified stronghold within Riverwood (the starport settlement). The Compact pushes local autonomy and seeks to consolidate civic power while avoiding overt military confrontation, though it is not nonviolent if cornered.
2. The Shield Assembly (continental)	Traditionalist/progressive blend, obscure visibility, aggressively uses force when it chooses, neutral toward player characters, and possesses a significant stronghold . This body functions as a planetary militia or paramilitary body, enforcing Jarls' decrees and defending territories against external threats and internal agitation.

If you like, I can fully expand both organizations into mini-entries (leadership, membership, tactics, outposts, rivalry with Jarls, hooks for PCs).

Points of Interest

Location	Description
Jarl's Palace Hall	The planet's primary civic building under the fusion core; your "1-star attraction" (worth seeing if you're on the world). Monumental, brutalist, ceremonial.
The Brain Forest	Dangerous and largely off limits. The toxic-fume defense makes it a true hazard and a source of mystery/plots.
Riverwood	Starport town, largest settlement and center of external trade and the Hearth Compact.
Comet Dock/Storage	Annual comet handling and ice-import infrastructure.
Last Asteroid Remnant	The still-orbiting mass that created the original shade; named or unaudited salvage sites could make excellent adventure hooks.

Play & Plot Hooks (quick, actionable)

Hook Name	Details
Water Contract Heist	The annual comet delivery is vulnerable to piracy or local interference—sabotage would threaten the entire population.

**Pink Forest
Mystery**

Why does the grove defend itself? Is it terraforming tech gone wrong or an intentional bioweapon? PCs can investigate or attempt to harvest safe samples.

Jarls' Coup

Two Jarls push to stop Federation payments and close the world—use this to spin a political mission for the PCs (diplomacy, covert ops, or sabotage).

**Scout Waystation
Tension**

Federation personnel are aging and underfunded; a small diplomatic incident could escalate into a show of force that the Jarls will interpret as occupation.

**Salvage the
Remnant**

The last asteroid (still geosynchronous and dangerously close) may contain salvageable terraforming hardware or forbidden data.
